

LIGHTING

Morse Manufacturing drums up big annual savings by partnering with National Grid.

As a company that recently celebrated its hundred-year anniversary, Morse Manufacturing knows how important continually investing in people and facilities is to long-term success. Since 1923, Morse has been manufacturing its extensive line of Drum Handling Equipment in a single factory in Syracuse, N.Y. So, when they decided to upgrade their facilities to bolster employee safety and energy efficiency, National Grid was ready to help. “Morse Manufacturing just celebrated 100 years in business...”, said President Nathan Andrews. “In order to have a legacy of that duration, we need really good quality partners – and National Grid is one of those partners.”

After completing a no-cost assessment of Morse’s facility, we determined upgrading to new lighting would increase employee safety, energy-efficiency, and savings. After a smooth and on-time installation of lighting and additional equipment, Morse’s new facility was set up for success, safety and savings for well into the future.

The project with Morse Manufacturing is one example of how we partner with businesses on a variety of energy-related projects. Whether your goal is to increase savings, make your facilities more sustainable or anything in between, we can help. To get started, schedule a no-cost energy assessment for your business and see how you can save. You’ll discover energy-saving solutions that can lower monthly overhead costs and improve ambience, safety and customer confidence. We’ll also work with you to install equipment at your convenience. As your energy partner, we’ll help guide you through the process.
